DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22, drawn to a biochemical analyzing method, classified in class 436, subclass 149.
 - II. Claims 23-~~25~~, drawn to a biochemical analysis unit, classified in class 435, subclass 285.2.
 - III. Claims ~~36~~^{and 38}, drawn to a target detecting apparatus with a scanning mechanism for three-dimensional scanning, classified in class 422, subclass 50.
 - IV. Claims ~~37~~^{and 39}, drawn to a target detecting apparatus with a scanning mechanism for two-dimensional scanning, classified in class 73, subclass 618.
 - V. Claims 40-41, drawn to a biochemical analysis apparatus, classified in class 435, subclass 287.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of group I and group II-V are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as the method of gel electrophoresis.

Art Unit: 1641

3. Inventions of group II-V are unrelated and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as claimed have different functions. The feature of an electrophoresis section of group II is not required by the claims of the other groups. The feature of a scanning mechanism for three-dimensionally scanning of group III is not required by the claims of the other groups. The feature of a scanning mechanism for two-dimensionally scanning of group IV is not required by the claims of the other groups. The feature of means for binding the probes with targets of group V is not required by the claims of the other groups.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
